8 – 10 June, 2022

Biodiversity monitoring for development of sustainable production chains in Latin America

GITEC-IGIP Consulting Group

GITEC-IGIP
Consulting Group

1. Overview

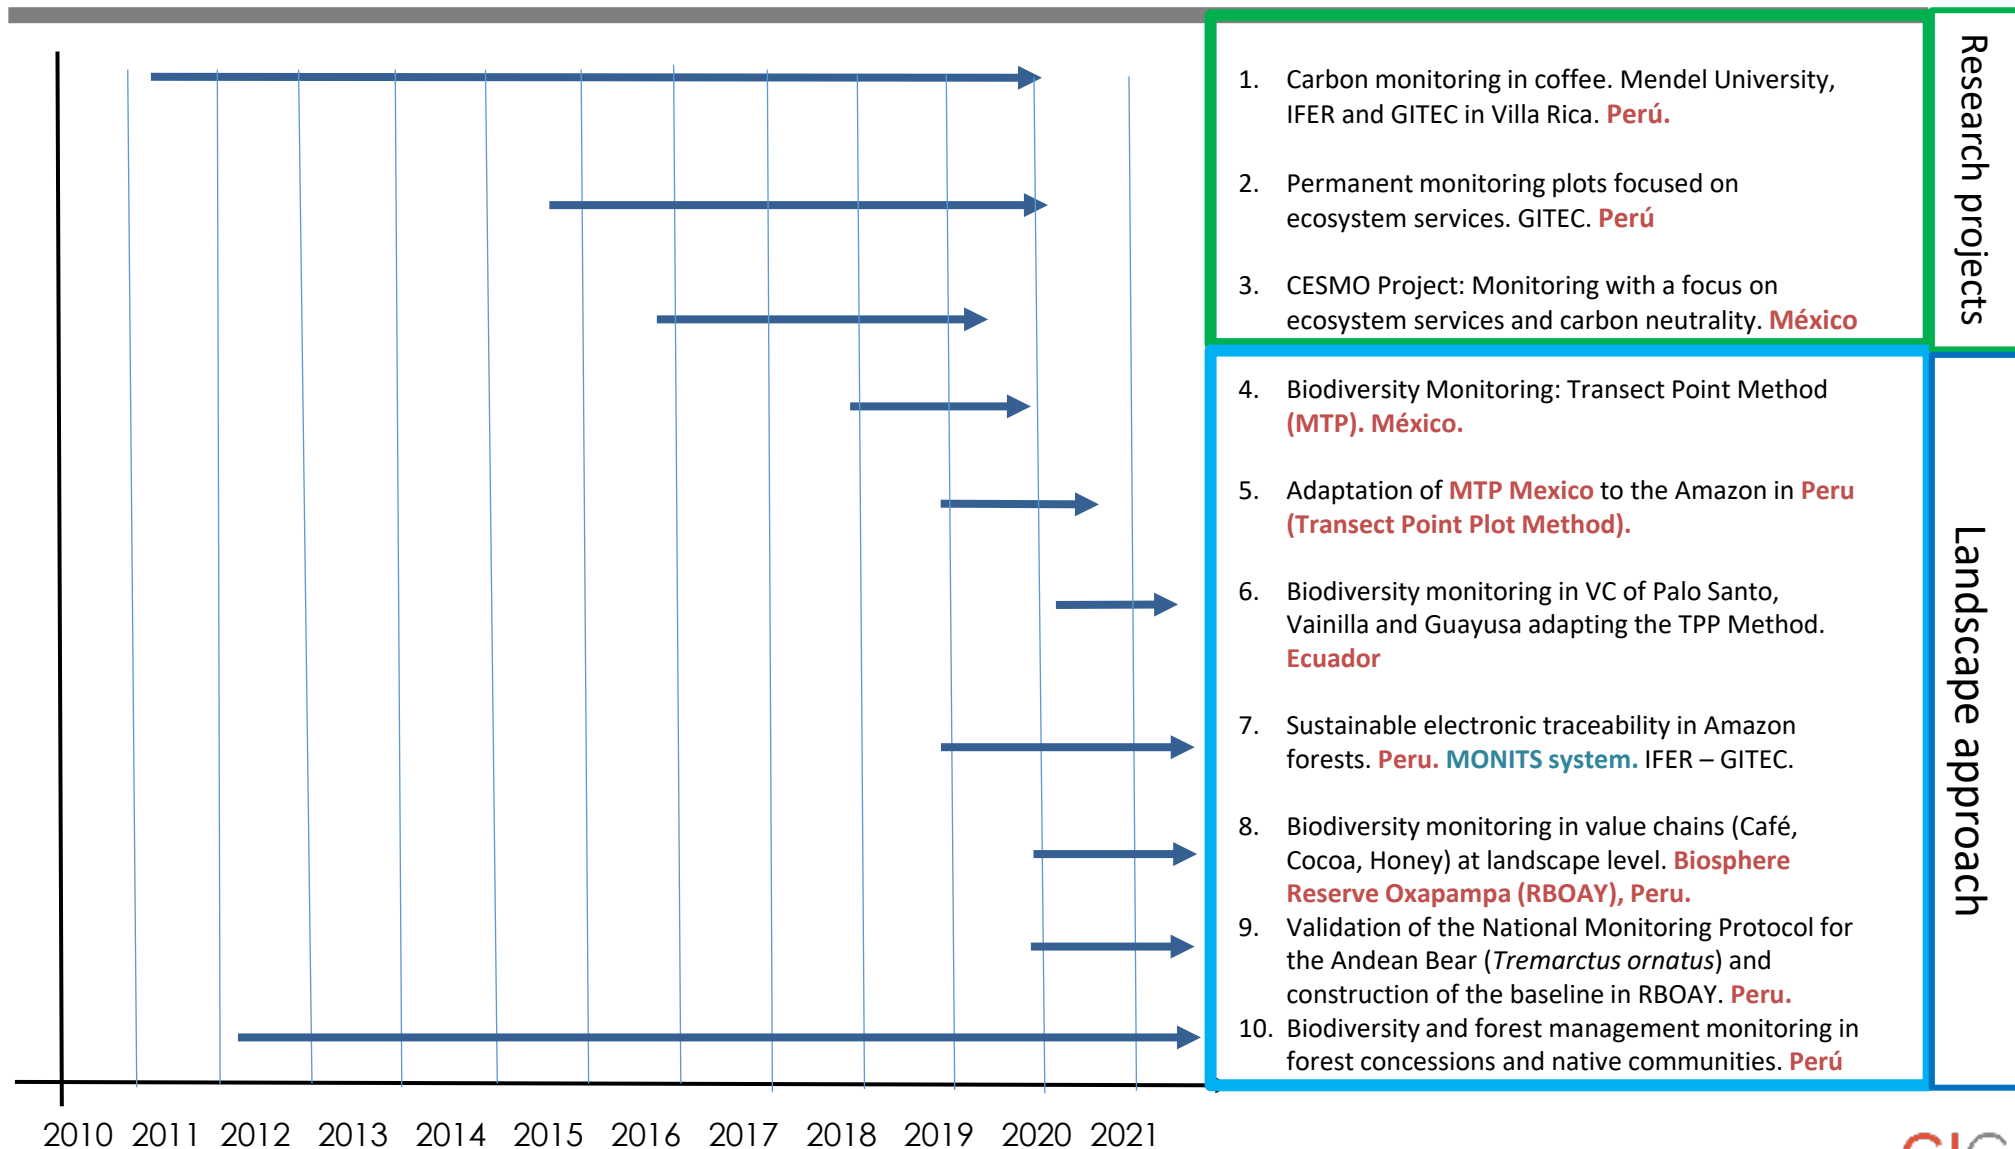

- Monitoring initiatives in Latin America
- What are we monitoring?
- Why are we monitoring?

2. Approach

3. Methodology

4. Results: Examples from Mexico, Ecuador and Peru

Overview | Our monitoring initiatives in Latin America

Overview | Project overview

MEXICO: Integrated Landscape Management for Biodiversity Conservation in Sierra Madre Oriental II

General project information

- **Financing:** BMZ
- **Client:** GIZ
- **Consulting budget:** 1.431.000 EUR
- **Investment:** 7.000.000 EUR
- **Project duration:** 2016 - 2021

PERU: ProAmbiente - Contributing to Environmental Goals of Peru I+II

General project information

- **Financing:** BMZ
- **Client:** GIZ
- **Consulting budget:** 7.688.519 EUR
- **Investment:** 34.000.000 EUR
- **Project duration:** 2018-2022

PERU: ProAmbiente - Implementation-Oriented Environmental and Forestry Management

General project information

- **Financing:** BMZ
- **Client:** GIZ
- **Consulting budget:** 1.329.800 EUR
- **Investment:** 8.000.000 EUR
- **Project duration:** 2022-2024

ECUADOR: Bioeconomy - Conservation and sustainable use of natural heritage

General project information

- **Financing:** BMZ
- **Client:** GIZ
- **Consulting budget:** 2.500.000 EUR
- **Investment:** 10.000.000 EUR
- **Project duration:** 2019-2021
- **Partner(s):** WWF

Overview | What are we monitoring?

Habitat monitoring

- Tree layer structure
- Structure of the shrub layer
- Structure of the herbaceous stratum
- Soil occupation and fallen woody material
- Associated fauna community: Mammals and birds

Monitoring of conservation objects

- Phenology
- Regeneration
- Presence of pests/damage

Management monitoring

- Harvesting methods
- Management practices
- Associated potential uses
- Organizational processes

Overview | Why are we monitoring?

Promoting biodiversity conservation

- Promote research
- Provide technical tools for monitoring to key stakeholders
- Encourage bio-entrepreneurship and business-academia partnerships

Promoting sustainable use of natural resources

- Improving user capacities
- Empowerment of producers/scientific inputs to adapt management practices
- Diversification of income (tourism)
- Improving the quality of life of communities

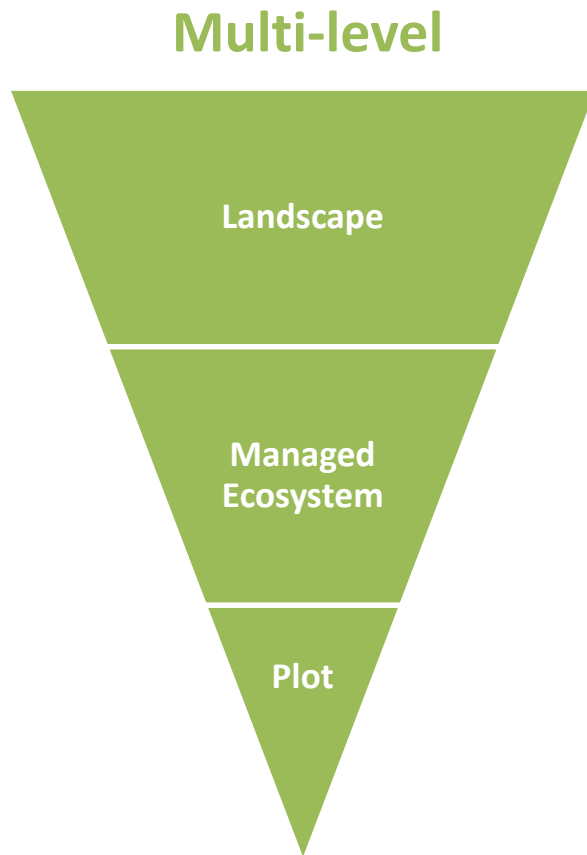

Strengthening governance of value chains

- Transparency of the data management process
- Provision of inputs for decision making and policy-making
- Strengthen public policy

Approach | Ecosystem and multi-level/multi stakeholder approach

Source: own elaboration

GIS WEB

Field-Map

Mobile App

Integrated monitoring transects (TIM)
with a vision of territorial articulation for landscape sustainability and human health

Gradients of change along the production ecosystem

- Soil, vegetation and fauna
- Biodiversity flow
- Production (quality, productivity)
- Effectiveness of management practices at the landscape level

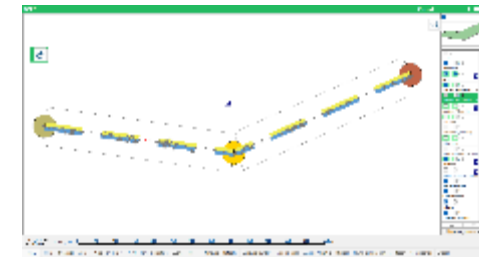

Methodology | Adaptation of the transect to different ecosystems

México: MTP - Articulated biodiversity monitoring

Transect 2 Km

Peru: TPP - Biodiversity monitoring in forest management (tropical forest)

Transect 1 Km

Ecuador: TPP – Biodiversity monitoring in productive value chains (vanilla, guayusa, palo santo)

Transect 540 m

Peru: TIM - Biodiversity monitoring in productive value chains (coffee, cocoa and honey) in the RBIOAY Biosphere

Transect 600 m
Includes bear monitoring

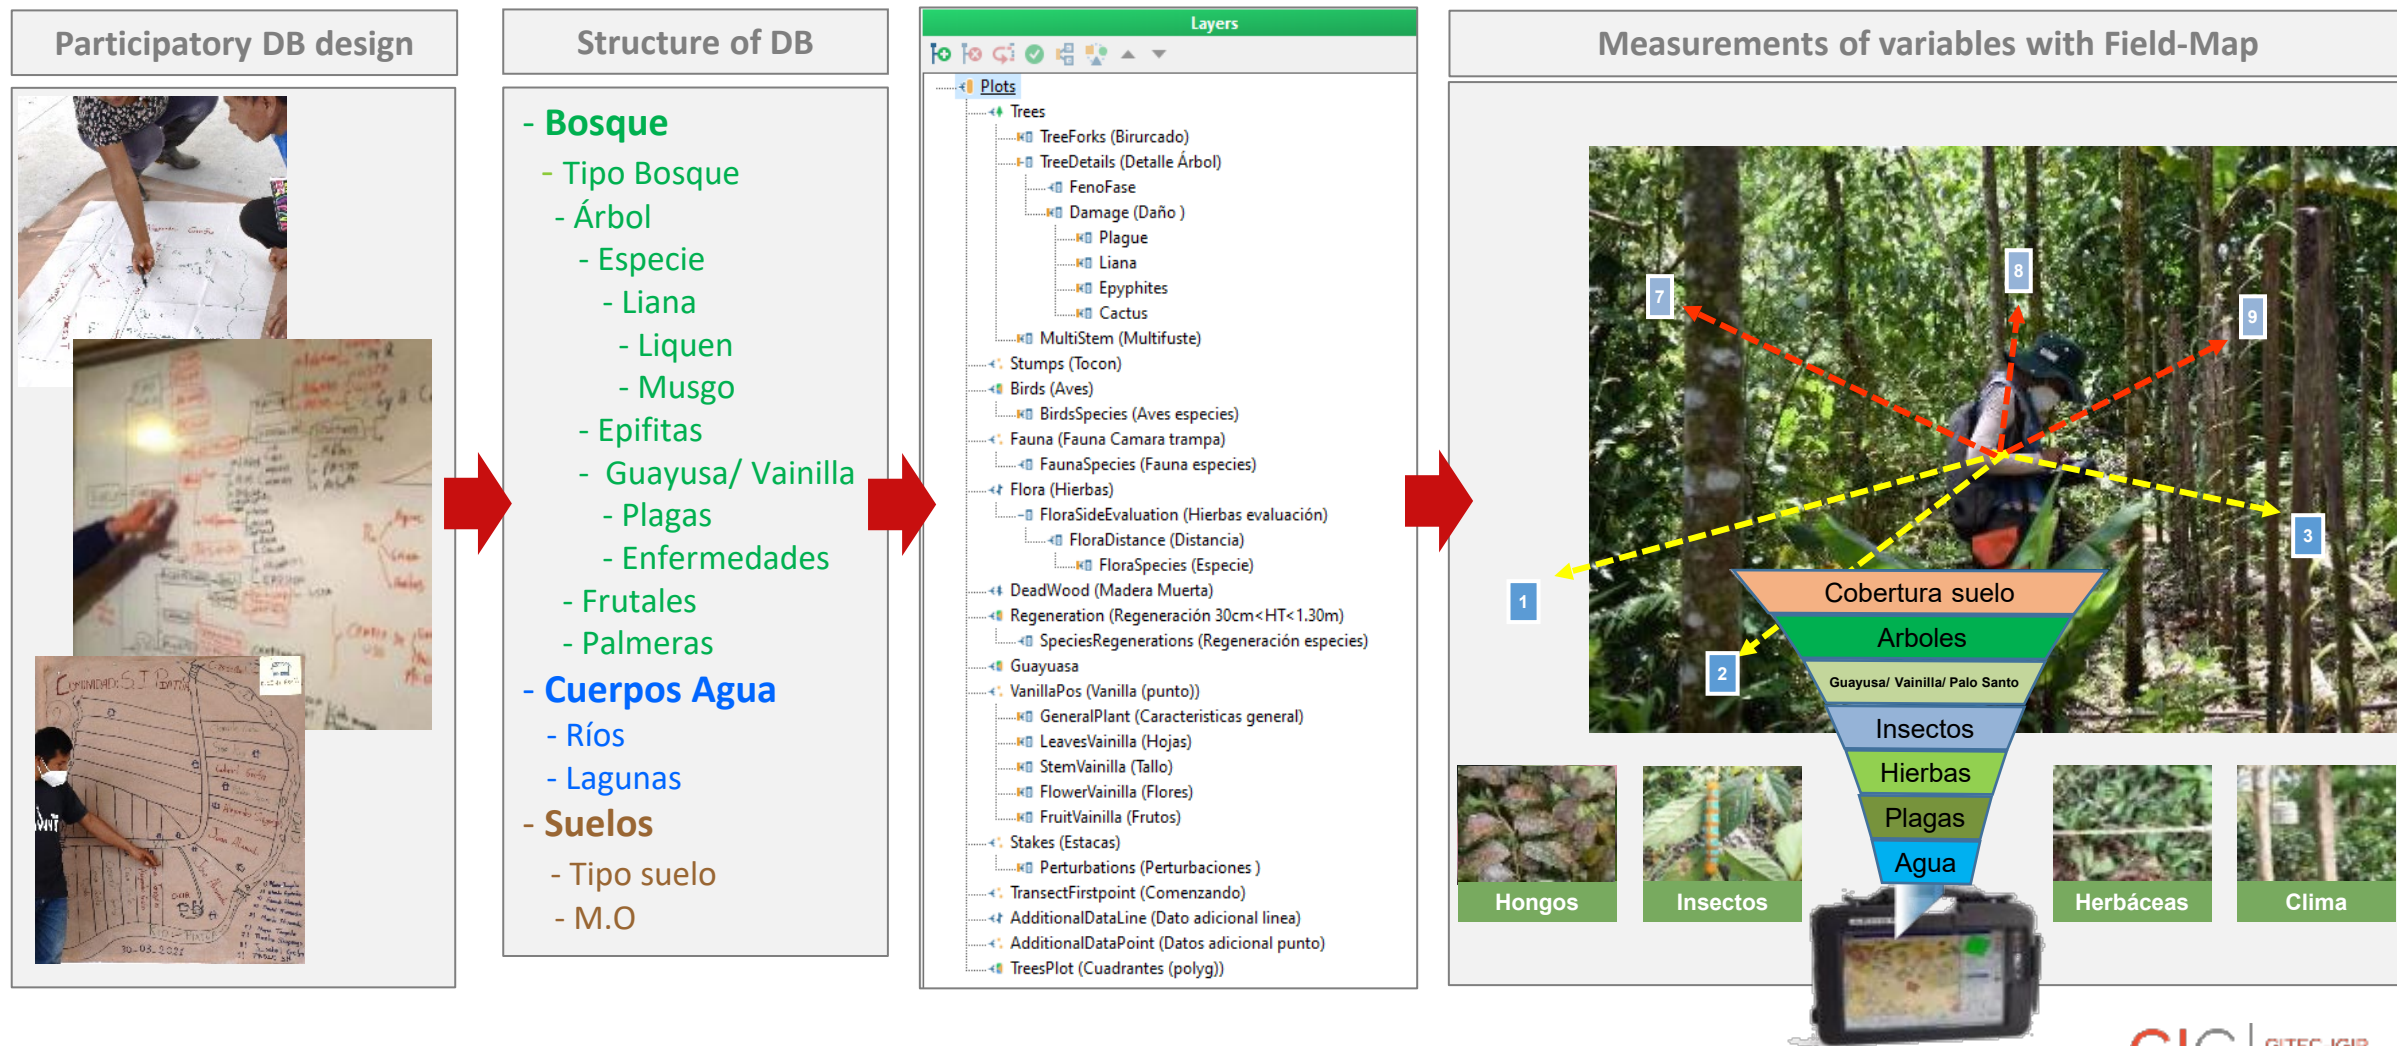

Methodology | Example of Monitoring Transect

- Transect of 20 m x 560 m
- Breaking point 140 m from the center
- Birds, 30 m = radius
- Mammals
- Dead wood and herpetofauna
- Quadrants for two trees and two shrubs (four places on each side), 10 m x 10 m
- Crops Quadrants, 20 m x 20 m
- Quadrants for regeneration 5 m x 5 m
- Transect for Herbaceae, 4 m line

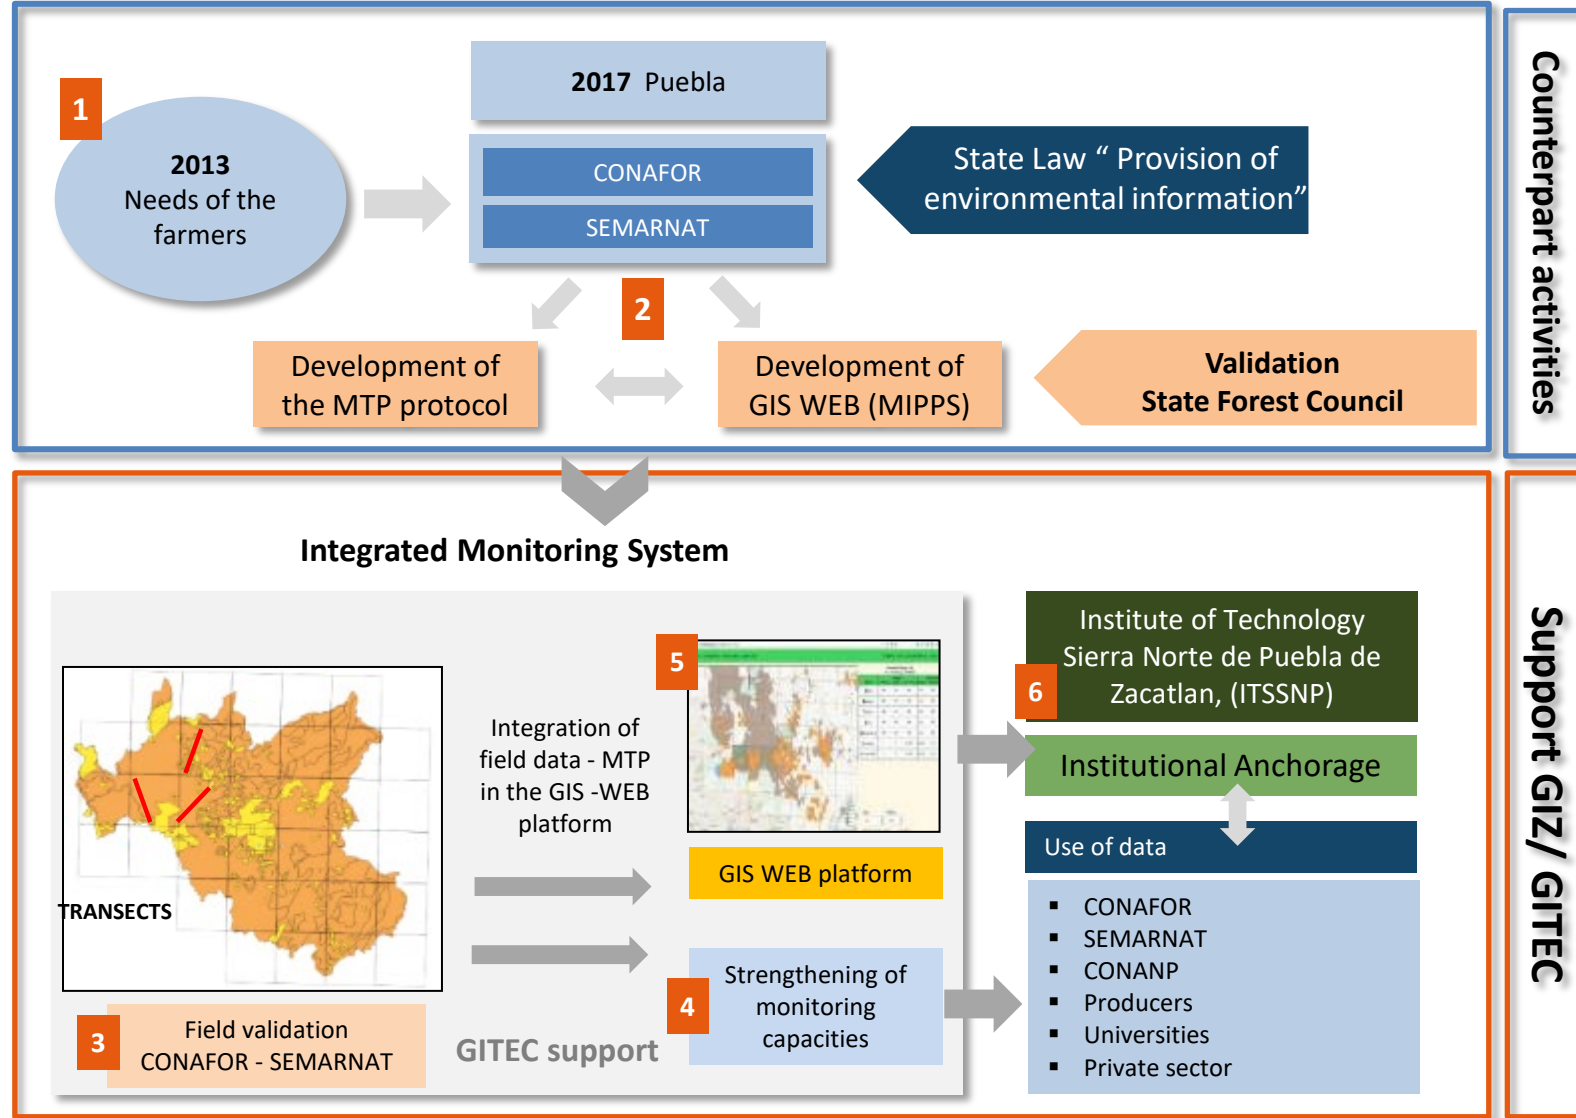

Methodology | Monitoring design in Mexico, Ecuador and Peru

Design of the database structure and participatory transect mapping

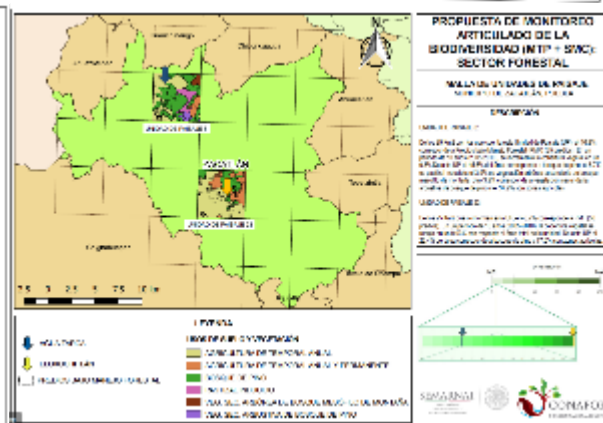

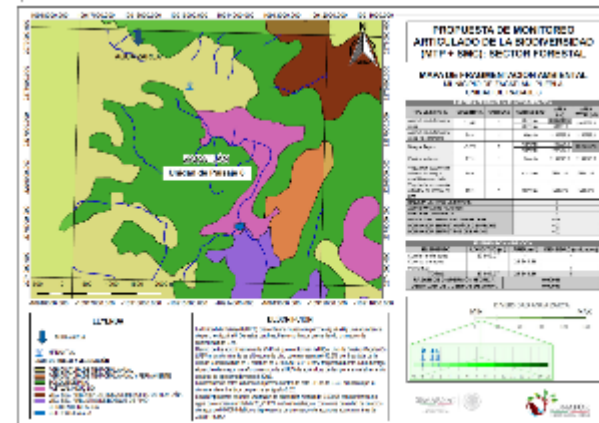

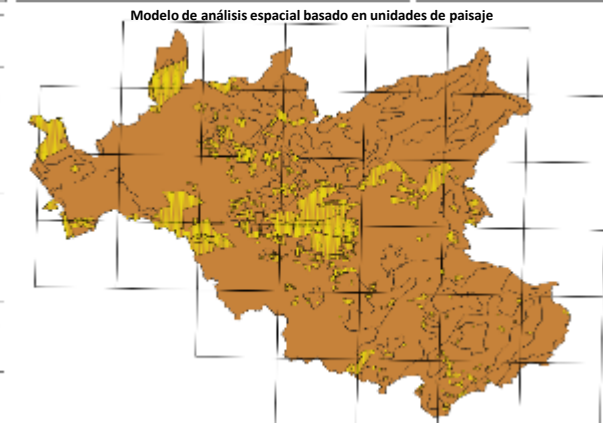

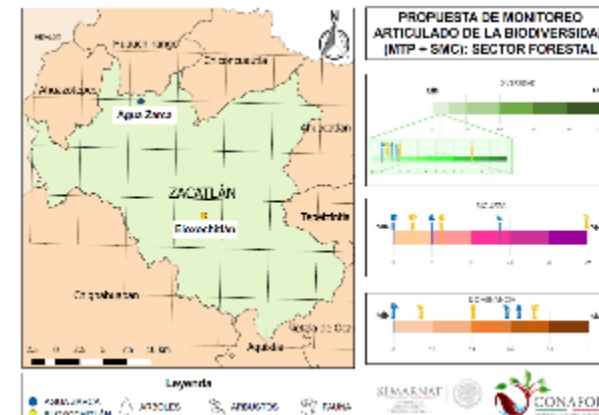

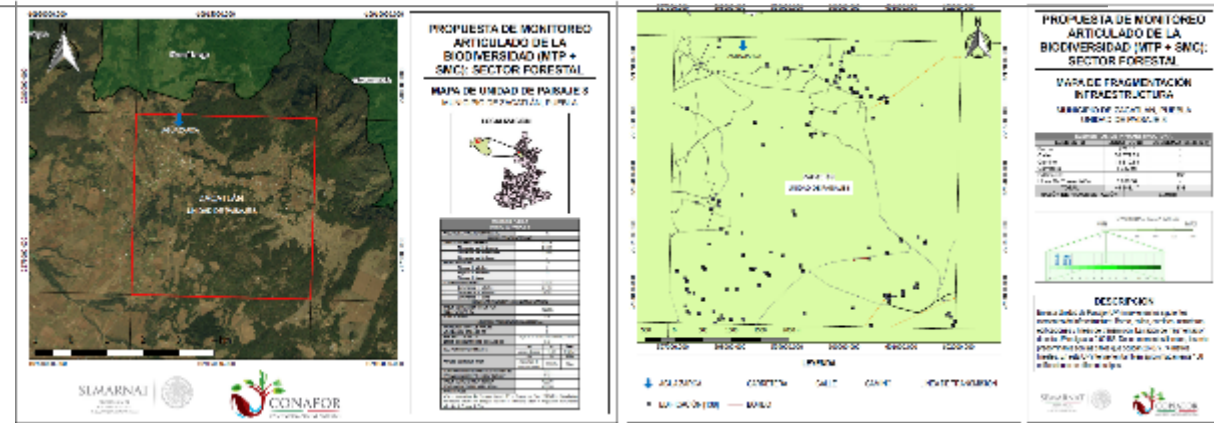

Methodology | Mexico: Model for monitoring implementation

Establishment of an MIP (*Integrated Landscape Management*) based monitoring system using Method MTP

Results 1 | Mexico: Results of biodiversity monitoring MTP

Articulated biodiversity monitoring baseline

Results 2 | Peru: Biodiversity monitoring in forest concessions

Mastofauna: 3 cameras were installed in concessions with different duration of management

N°	Familia	Especie	Nombre Común	P A R C E L A S									
				1	2	3	4	5	6	7	8	9	
1	Dasyproctidae	<i>Dasyprocta sp.</i>	Añuje			X							
2	Canidae	<i>Atelocynus microtis</i>	Perro de orejas cortas			X							
3	Felidae	<i>Panthera onca</i>	Jaguar			X							
4	Callitrichidae	<i>Saguinus mystax mystax</i>	Pichico Barba blanca								X		
5	Atelidae	<i>Lagothrix lagothricha poeppigii</i>	Mono Choro de Poeppig										X

Vulnerable Species:

- The silvery woolly monkey (Mono choro de Poeppig - *Lagothrix lagothricha poeppigii*), is categorized as Vulnerable (VU) nationally and internationally;
- The Jaguar (*Panthera onca*) categorized as Near Threatened (NT) and listed at CITES level I;
- The Perro de orejas cortas (*Atelocynus microtis*) categorized as Near Threatened (NT) by the IUCN and Vulnerable (VU) by the Peruvian government.

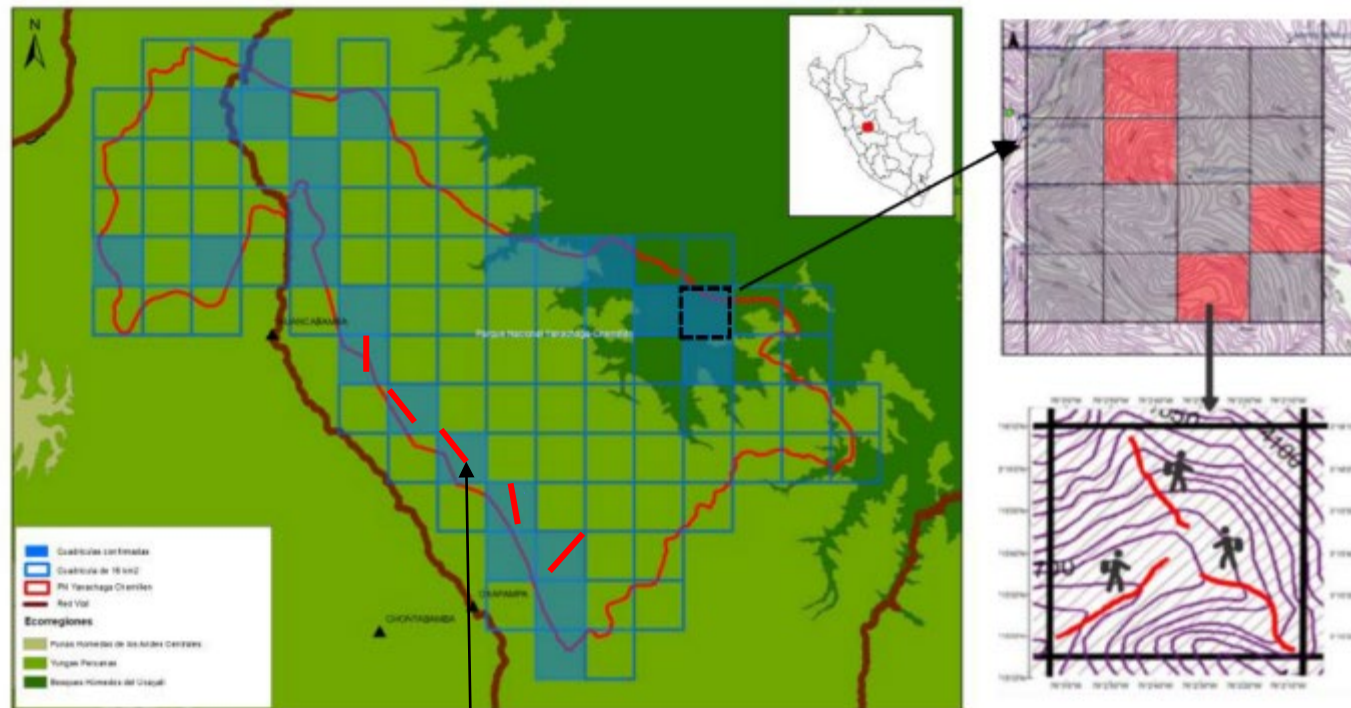

Results 3 | Peru: Monitoring of the Andean Bear (*Tremarctos ornatus*)

Database structure: TIM Bear

4x4 km grid for bear sampling

6	Impulsado
7	Atorado
8	Agredido
9	Asesinado
10	Sobreviviente

Data collection from **11 transects and with 6 camera traps**

- **6 transects in the Palo Santo VC** (1 PPM in Agua Blanca, 3 PPM in Santa Elena and 2 PPM in Joaz)
- **5 transects in Amazonia** (located in farms of Kichwa producers of **Guayusa**, with trials of adaptability of *Vanilla odorata* and *pompona* with a focus on the chakra system, located in the community of San Juan de Piatúa, Pastaza Province).
- **9 mammal and 31 bird species** on the farms of Kichwa producers (data from the coast in the process of being collected).
- **130 plant species:** 42 in Palo Santo and 88 in the farms of Kichwa

20 Partnerships

- **5 Universities:** Technical University of Manabi, Universidad del Sur de Manabí, Universidad Península de Santa Elena, Universidad Estatal Amazónica UEA, Puyo - Pastaza and Universidad Regional IKIAM, Tena - Napo.
- **8 Public entities:** Machalilla National Park; Decentralized Autonomous Government (GAD) Jipijapa, GAD Puerto López, GAD Santa Elena; Agua Blanca Community, San Marcos Community; Pastaza Prefecture; Santa Clara Municipality.
- **3 Companies:** Ecuadorian Hands, El Artisan, L'Herborea
- **2 Associations:** Agroforestal Palo Santo; Asociación Wiñak
- **2 NGOs:** Heifer; Fundación Pachamama

60 persons trained

- 24 in the **Palo Santo VC:** 6 in Joas, 7 in Santa Elena, 11 in Agua Blanca (Machalilla)
- 36 in **Amazonia:** 7 kichwas monitors, 2 value chain advisors, 2 field technicians (Wiñak), 3 workshops with 25 persons.

Results 4 cont'd | Ecuador: Vanilla, Guayusa and Palo Santo management practices

Monitoring Transects show the impact of good production practices in Vanilla, Guayusa and Palo Santo

Community attributes of mastofauna encountered by Transect

Atributos comunitarios Mastofauna	PPM 1-5
Taxa_S	9
Individuals	34
Dominance_D	0.1522
Shannon_H	2.003

The presence of large mammals is associated with good ecological integrity (Mora, 2017). In the case of the Chakra - Guayusa system all plots report this faunal group.

ACERCA DE MONITS

- **MONITS** is a GIS-interactive information system for Sustainable Forest Management (SFM) developed by IFER, GITEC and CFU.
- GIS integrated database related to census, logging, skidding, clearing and transport to industry.
- Records all forest harvesting activities and generates Government Operations Book (LO).
- Prepare log and GTF list (forest transport guide).
- It will allow the generation of height and volume equations to be integrated into the following Operational Plans (OP).

Main project features and services

- ✓ Good financial Governance of Woreda administrations implementing SLM budgets
- ✓ Building and maintaining SLM infrastructures
- ✓ Livelihood support, biodiversity and climate change linkages
- ✓ Large scale Baseline Studies in 3 Regions
